# DA

## SMALL BAG PACKING MACHINES

PAGLIERANI

# DA Series Packing Machines: A wide range of solutions for filling small bags.

## CLOSING OPTIONS

The filling dynamic assures perfectly square, flat-bottomed, self-standing bags, with the following closing options:

**fin**

sealed

stitched

glued

**brick**

## APPLICATIONS

The vast selection of optionals and equipment available satisfies the most widely varying applications and requirements:

- dosing or weighing;
- electronic weight control with automatic feedback to the dosing system, rejection of non-conforming bags and weight recording;
- bag formation starting from reels (available on DA 40 only, with heat sealable films/laminates);
- glued, stitched or sealed closure;
- labelling;
- bundling and shrink-wrapping;
- modem connection for remote monitoring & programme changes.

## DA 20

- compact and economical
- for pre-formed bags of 500 g or 1 kg (**)
- for low production rates

## DA 20 MAXI

- for pre-formed bags from 5 to 10 kg (**)
- for high production rates

## DA 40

- for pre-formed bags from 500 g to 5 kg(**)
- capability for combination with machine for forming bags from reel (heat-sealable films/laminates) up to 3 kg(**)
- for medium production rates

## DA 80

- for pre-formed bags from 500 g to 5 kg(**)
- for high production rates

## DA 120

- for pre-formed bags from 500 g to 1 kg(**)
- for very high production rates

** Bag weights refer to packs for products having bulk densities from 0.5 to 0.8 kg/dm$^3$. Different densities affect the weight of the bag.
